PROFESSIONAL SUMMARY

Detail oriented Data Analyst with hands on training and project experience turning raw datasets into actionable business insights using SQL, Python, Power BI, and Excel. Delivered a 30% improvement in data accuracy and cut manual reporting time by 60% by building automated Excel and Power BI workflows during a structured data analytics training program. Holds an MBA in Finance & Marketing, bringing strong business acumen to data-driven decision making.

EDUCATION

MBA — Finance & Marketing — Vyas Institute of Management, Bikaner Technical University, Jodhpur 2021–2023
B.Com (Hons) — Business Finance & Economics — Jai Narain Vyas University (JNVU), Jodhpur 2019–2021

WORK EXPERIENCE

Data Analytics Training & Projects — WsCubeTech Sep 2025 – March 2026

- Used SQL to query, join, and aggregate real business datasets (sales, customer behaviour, operations for cross-departmental reporting)
- Used Python (Pandas, NumPy) to clean, transform, and analyze data, improving data accuracy by 30%.
- Built interactive Power BI dashboards (DAX, Power Query) to track KPIs such as sales performance and customer trends.
- Used Excel (Pivot Tables, XLOOKUP) to automate weekly and monthly reports, cutting manual reporting effort by 60%.
- Conducted EDA and created visualizations to identify trends and support data-driven business decisions.

PROJECTS

NYSE Financial Market Analysis (Capstone) | SQL · Python · Power BI [View on GitHub](#)

- Studied NYSE stock data to compare company performance, sector volatility, and investment risk.
- Built a Power BI dashboard showing returns and sector comparisons, backed by SQL and Python analysis.

Myntra Apparel Sales Analysis | Excel · XLOOKUP · INDEX-MATCH · Pivot Tables [View on GitHub](#)

- Analyzed pricing, ratings, and stock availability across 1,000+ Myntra products to spot demand gaps.
- Found that bigger discounts don't mean better ratings and suggested a smarter discount strategy to manage inventory.

Amazon Sales Dataset Analysis | SQL · Joins · Subqueries · Window Functions [View on GitHub](#)

- Used SQL to analyze Amazon's multi-category sales data and identify top-performing products and categories.
- Wrote queries with joins, subqueries, and window functions to track regional sales and flag high-return categories.

Supermarket Billing System | Python · Dictionaries · Loops · datetime [View on GitHub](#)

- Built a Python billing tool that automates supermarket checkout and removes manual calculation errors.
- Added automatic 10% bulk discounts on bills over ₹2,000 and generated time-stamped digital receipts.

TECHNICAL SKILLS

Excel | SQL (MySQL) | Power BI (DAX) | Python (Pandas, NumPy)
